

superDRY®

Water based hydrophobic water repellent solution that protects roof tiles from penetrating damp developed with the latest nanotechnology.

Recommended for

All mineral roof tiles and surfaces like concrete, clay, terracotta and slate.

Description

Unique one coat nanotechnology formula which has ultra thin molecules that bond with mineral substrates and creates a hydrophobic surface while the roof surface remains permeable to water vapour.

Advantages

Improves the functionality appearance and look of the roof. superDRY® molecules are very small and highly penetrating, which allows them to penetrate even into the smallest pores and make the surface water repellent. Its water permeability allows the surface to 'breathe' naturally.

It protects mineral substrates against ageing. Water runs off easily from the treated surface and dirt particles are washed off by rain or when rinsed with water, creating an easy to clean effect, with self cleaning properties. The roof tiles will be protected against green growth and dirty mold spores, which can lead to frost damage or humidity problems within the roof construction.

Wet roof tiles are also ineffective at keeping heat in. superDRY® creates water repellent roof tiles and are therefore more effective to keep heat in. The treatment is UV-stable and will not yellow or change the natural look of the roof tile.

Preparation

Ensure the surface is clean and free from contamination and is suitable for superDRY®.

Application

For application use a low pressure pump, spray, brush or roller. Take care to avoid sagging and only one coat is required. A minimum temperature of 5 °C is required for the application.

Coverage rate

150-200 ml per m² equals 1Litre for 5-8 m² depending on porosity.

Rainfast

30 – 60 minutes under average conditions (substrate and temperature dependent)

Packaging

25 Litre can (24 cans/pallet)

Appearance

A milky white liquid, but colourless when dried.

Equipment care

All equipment should be cleaned up in water directly after use.

Storage

Store away from direct sunlight and sources of heat and protected from frost.

Shelf life

24 months (in original sealed container).

Safety and regulations

Not classified as hazardous according to current labelling and for full information regarding handling precautions please consult the MSDS and product label.

Features & Benefits

- Water based
- Environmentally Friendly
- Easy to apply and handle
- Invisible and breathable
- Water Repelling
- Dirt Repellent
- Minimize the growth of moss and Algae
- Prevents Salt Efflorescence
- Weather resistant
- Internal and external use
- UV-stable, economical and long lasting
- Easy cleaning and self cleaning effect
- Saves time and money
