

superSHINE®

superSHINE® is a shiny and color intensifying water repellent for the treatment of bleached tiles. It has developed with an ultimate technology, makes roofs extremely water repellent and protects them against the ingress of moisture.

Recommended for

superSHINE® is ideal used for refreshing and color enhancement of bleached roof tiles. It transforms a dirty roof into a beautiful and shiny surface.

Description

superSHINE® improves the aspect of your roof and reinforces the protection and mechanical properties.

superSHINE® contains microscopic molecules. These penetrate through the pores deeply into the building material and protect it very efficiently against moisture.

superSHINE® protects porous building materials against weathering. It has self-cleaning properties, water and dirt particles found no hold on the treated surface. Roof tiles are protected against moss, algae, lichen and microorganisms. The surface remains dry and prevents frost damage as well as significant moisture problems. The presence of moisture in roof tiles is, in terms of insulation, completely ineffective as in the winter the heat in the interior of the property is able to flow outside.

superSHINE® creates a barrier against moisture and ensures the insulation properties of porous building materials. The system is UV-resistant and the treated surface will have an aesthetic aspect for many years

Preparation

The surface to be treated must be clean and dry.

Application

Use a low pressure pump, spray, brush or roller. A single application is sufficient. The exterior temperature may not be less than 5° C.

Coverage rate

200 ml per m² equals 1Litre for 5-8 m² depending on the porosity of the surface.

Drying time

30-60 minutes under average conditions (substrate and temperature dependent)

Equipment care

All equipment should be cleaned up in water directly after use.

Storage

Store away from direct sunlight and sources of heat and protected from frost.

Shelf life

24 months (in original sealed can).

Safety and regulations

Not classified as hazardous according to current labelling and for full information regarding handling precautions please consult the MSDS and product label.

Features & Benefits

- Water based solution
- Eco-friendly
- Easy, quick and clean application
- Transparent and breathable
- Water and dirt repellent
- Minimizes the growth of algae, moss and lichen
- Prevents salt efflorescences
- Weatherproof
- Suitable for indoor and outdoor
- Resistant to UV rays
- Affordable and long durability
- Self cleaning tiles
- Saves time and money
